

MVP build plan

No more major screens

The existing Parliamentary Zone screens plus the revised 15-item package are enough for MVP. The original structure — Area Overview, Voter Directory, Communities, Issues, My Issues, Representatives, Candidates — already carries the module; the controls that used to dead-end are now resolved by the AI, poll, event and election flows. What remains is updating seven existing screens and building the approved fifteen.

7**Existing screens to update**

Before development starts

15**New or revised items**

Approved as designed

12**Reference only**

Not built separately

12**Small states**

Designed during development

The three changes that drive everything else

01**Membership is automatic**

Verified profile plus constituency equals membership. Every join, request and pending control comes out of the existing screens.

02**One community home**

Community Network becomes the Parliamentary Community Home — eight tabs and a row of quick cards instead of a directory of 300 groups.

03**Reuse, don't rebuild**

Messages, post detail, directories, tourism and the Election Dashboard are reused as they are — no duplicate candidate or messaging systems.

PROCEED WITH

Updating approximately seven existing screens · developing the approved fifteen new or revised items · reusing existing Voice 360 features wherever possible · adding the confirmation, empty and error states during development. That completes the module without duplicating features inside Voice 360.

04 Invite Members · QR · Contacts Keep the screens, change the meaning

Users are not inviting anyone into Dhaka-10 or Natore-4. The invitation reads: **"Join Voice 360, complete your profile and automatically connect with your official Parliamentary Community."** The QR opens the Voice 360 download page or the Parliamentary Zone introduction page.

05 All Issues & Create Issue

Connect to AI Issue Generator · AI Smart Suggestions · report manually · My Issues. When the AI creates a draft, the existing Create Issue form opens with the information prefilled — no second form.

06 Current Representatives

Give working destinations to View Profile · Message · Voting Reminder · I Will Vote · performance or activity details. Messaging reuses the existing Voice 360 Messages feature.

07 Nominated Candidates

Make View Profile · View Manifesto · Compare · Follow Updates · Share all work. No duplicate candidate or messaging systems.

Approved to build — 15 items

KEEP AS DESIGNED

P01 AI Assistant Home	P02 AI Conversation	P03 AI Recommendation Detail
P04 AI Issue Generator	P06 AI No-Data State	P08 AI Smart Suggestions
P12 Create Poll	P13 Poll Voting	P14 Poll Results
P15 Event Detail with RSVP	P17 Create Event	P18 Latest Community Updates
P24 Voting Reminder	P25 I Will Vote	NEW Community Home / automatic-membership state

Designed, but not built separately

KEEP AS REFERENCE

P05 AI Follow-up Questions — show inside AI Conversation	P07 AI History — reuse Voice AI history with a Parliamentary filter
P09 Join Request — remove	P10 Pending Approval — remove
P11 Joined Community — member status on Community Home	P16 RSVP — merge into Event Detail
P19 Update Detail — reuse existing post detail	P20 Famous Places — use Tourism & Discovery
P21 Place Detail — reuse existing place detail	P22 Local Directory — open the existing Local Directory
P23 Directory Detail — reuse existing directory detail	P26 My Election Activities — a tab inside the Election Dashboard

Small states still required

NOT FULL SCREENS

Design and implement these during development, not as separate design deliverables.

Automatic membership confirmation	Constituency change confirmation	Poll vote submitted
Event RSVP confirmation	Reminder saved	Voting pledge confirmed
Cancel pledge confirmation	Empty states — no issues, polls, events or announcements	Permission denied — viewing another constituency
Loading	Error	No internet

FINAL DECISION

No more major screens are required for the Parliamentary Zone MVP. Update the seven existing screens, build the approved fifteen, reuse the rest of Voice 360, and add the confirmation, empty and error states in development.
